

3. Modified N-gram Precision

Clipped count of matching n-grams to avoid over-counting.

$$p_n = \frac{\sum_C \sum_{\text{ngram} \in C} \text{Count}_{\text{clip}}(\text{ngram})}{\sum_C \sum_{\text{ngram} \in C} \text{Count}(\text{ngram})}$$

$$\text{Count}_{\text{clip}} = \min(\text{Count}(\text{ngram}), \text{MaxRefCount}(\text{ngram}))$$
