

4. chrF Score

Character-level F-score using character n-grams.

$$\text{chrF}_{\beta} = (1 + \beta^2) \cdot \frac{\text{chrP} \cdot \text{chrR}}{\beta^2 \cdot \text{chrP} + \text{chrR}}$$

where chrP = char n-gram precision, chrR = char n-gram recall, $\beta=2$
